

TEXTGATE-NP

Corporate SMS Server

General Description

Short Message Service (SMS) technology has been acknowledged as one of the enormous achievements in today's wireless network.

Acknowledging this success while strongly believe in its continual existence and growth, Beta Technology has developed TextGate-NP to enable corporations in building their enterprise wireless applications or services within the existing LAN/WAN, taking advantage of the SMS technology.

TextGate-NP Design

TextGate-NP is designed in modular form for the flexibility in implementing new services, if needed, without affecting existing services.

Key components are:

- BT-Office Application
- STG SMS Engine
- GSM Modem

Built-In Web Server

TextGate-NP comes standard with web server functionalities for remote users, which allows them to access using any standard Internet browser program.

The flexible port configuration further allows it to run alongside the standard web service in the same server hardware.

Standard Features

TextGate-NP is built with many standard but innovative features, such as the following:

- Text and Unicode Support
- SMS Broadcast
- SMS Scheduler
- SMS Delivery Report
- SMS Inbox/Outbox
- SMS Auto-Forward
- SMS Auto-Response
- SMS Concatenation
- Reply SMS Logging
- Remote Application Trigger
- SMS White List
- SMS Black List
- Allow/Restrict Service Template
- Monthly Quota Service Template
- Browser Based Client Interface
- Normal/Superuser Client
- System/Individual Phonebook
- SMS In/Out Loggings
- .. and many more.
